Pair With Target Sum (Unsorted)

Practice Part A - Problem 3 | Python

Task: Return True if two distinct elements sum to target; values can be negative or duplicated.
Brute-force option:

```
def hasPairWithSum_brute(nums, target):
for i in range(len(nums)):
for j in range(i + 1, len(nums)):
if nums[i] + nums[j] == target:
return True
return False
```

Hash-set option:

```
def hasPairWithSum(nums, target):
seen = set()
for value in nums:
if target - value in seen:
return True
seen.add(value)
return False

print(hasPairWithSum([2,7,11,15], 9))
print(hasPairWithSum([3,4,6], 20))
```

Output: True; then False.
Brute force: O(n^2) time, O(1) space. Hash set: average O(n) time, O(n) space.
