Quiz Answer Key

Practice Part B - Questions 1-10

Q1. B - O(1): accessing a value at a known array index is constant time.
Q2. C - Insertion: adding an element is insertion.
Q3. C: match required operations and constraints to suitable data structures.
Q4. C - Time vs space trade-offs: caching uses extra memory to reduce recomputation.
Q5. B - O(m+n): two separate, non-nested loops add their costs.
Q6. C - Linear data structure: elements are arranged sequentially.
Q7. C - O(n): Big-O drops constant factors and additive constants.
Q8. D - Linked list: it is a non-primitive data structure.
Q9. B - O(m*n): every cell in an m by n grid is visited.
Q10. C: organize, store, and access data efficiently for required operations.

Answer string: B, C, C, C, B, C, C, D, B, C.
